

# Requirements elicitation

Last edited by [An Nguyen](#) 1 year ago

We did this stage in our 2nd Iteration. First, we define our key stakeholders for this project. Then, we gather + analyze some user stories to extract the requirements for the product. Lastly, we prioritized the requirements and confirmed features for development.

The result of this process can be seen in the issue board [Requirement](#) . There, we have some user stories with the label [req:user-story](#) and the confirmed features for development with the label [req:confirmed-feature](#) . More detailed descriptions of those user stories and features can be found there.

## User stories

Here are our defined user stories. For more details on each user story, please check out our [Requirement](#) issue board. The user stories are labeled with the [req:user-story](#) label. Including:

- [#22 \(closed\)](#) : AS a student, I WANT TO track the progress of my tasks SO THAT I can keep track of my work progress
- [#15](#): AS a freelance graphic designer, I WANT TO create a project timeline SO THAT I can stay on top of deadlines
- [#14](#): AS a lecturer, I WANT TO perform advanced data analysis SO THAT I can monitor my productivity, student engagement.
- [#12](#): AS A student, I WANT TO note down my ideas SO THAT I can brainstorm using the notes
- [#13](#): AS a student, I WANT TO create different categories, SO THAT I can categorize my notes
- [#11](#): AS A student, I WANT TO add my own task into the journal, SO THAT I can track my weekly schedule
- [#10 \(closed\)](#): AS a lecturer, I WANT TO plan and manage my lectures/assignments schedule for multiple courses SO THAT I can ensure a smooth academic semester

## Confirmed features

Using the user stories, here are the extracted confirmed features selected for development. For more details on each feature, please check out our [Requirement](#) issue board. The features are labeled with the [req:confirmed-feature](#) label. Including:

- [#21 \(closed\)](#): Create task/todo/scheduled/reminder items
- [#17 \(closed\)](#): Create personal notes
- [#16 \(closed\)](#): Timeline/calendar
- [#23 \(closed\)](#): Tracking tasks progress
- [#19](#): Item categorization
- [#18](#): Search Item
- [#20](#): Edit item
- [#47](#): Sort items
- [#48](#): Delete items
